

When the Developers Become the (Micro) Crowd:
An Educational Case Study on Multidisciplinary Requirements Engineering
CrowdRE'21
21.9.21

Meira Levy^{1,2} Irit Hadar² Assaf Krebs¹ Idit Barak¹

1 Shenkar, Engineering, Design, Art

2 University of Haifa

Loneliness is one of the major problems in our society in the 21th century.

750 students

30 specialists from Shenkar and worldwide

25 lecturers from Shenkar – teams' leaders

5 lectures

5 organizations

4 preparation days

4 "Merkaha" (Jam) days

3 international groups

2 schools and research centers of Shenkar

1 panel of specialists

1 Miro collaboration environment

Human Centred Design

"Jam week" Event Details

Design Thinking Process Diagram*

אנוש - כי בריאות הנפש
זה הסיפור של כולנו

Loneliness of:

Old-aged people

Covid-19 hospital departments' staff

mentally challenged people

children with neurological problems

Z-generation

< 1%

Micro-crowd (MC) based requirements engineering (RE) was proposed as a gradual approach to crowd-based RE in order to mitigate risks stemming from this approach, such as low engagement of the crowd's individuals

1. How did the MCs perform RE activities while practicing the DT methodology?
2. How did the online, structured, collaborative tool foster DT in MC RE?

Case study

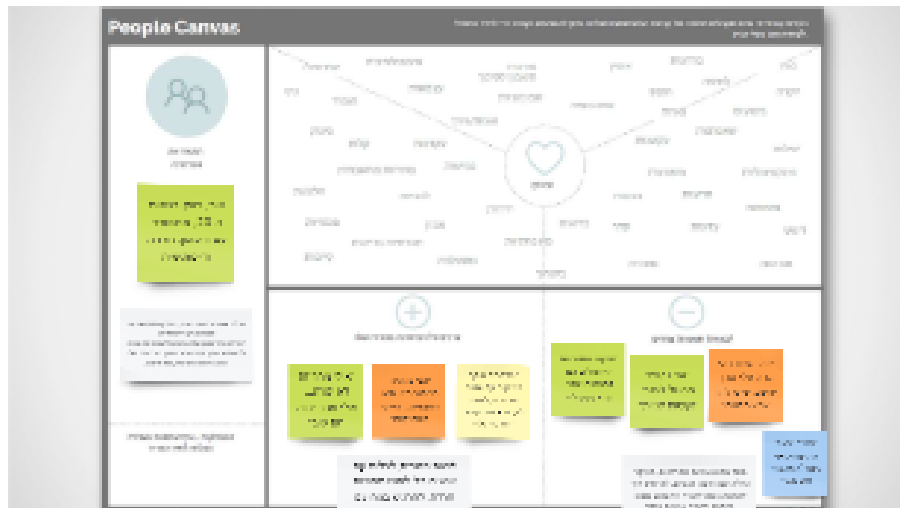

Qualitatively analyzed the data gathered on the team's online boards

Results:
MC-based RE in the DT process

Each MC was comprised of 5-6 groups, working with one organization

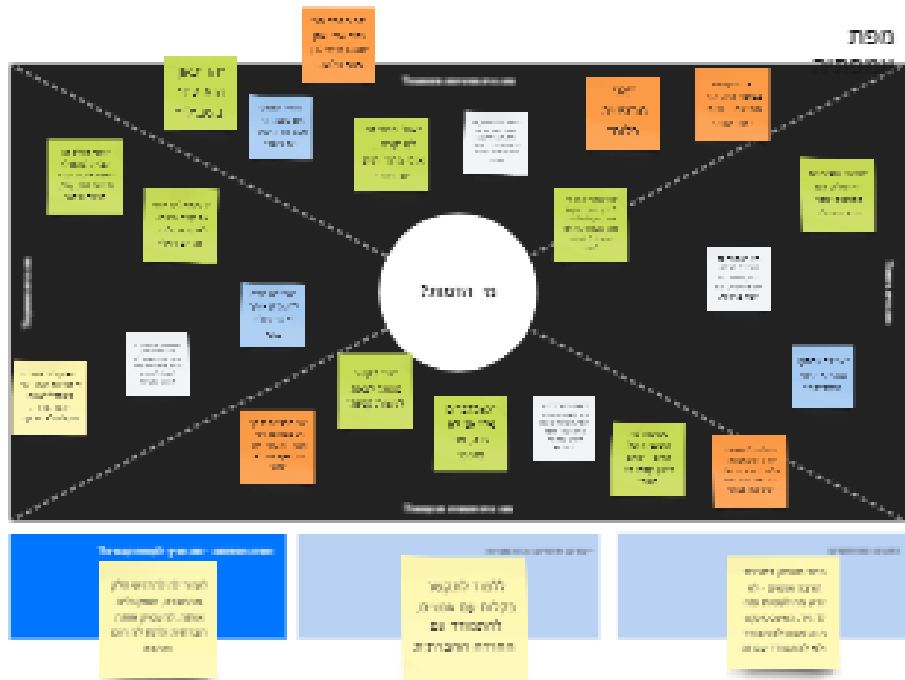

Each group included 6 teams of 5-6 students each.

Each team in the MC worked on private Miro boards and came up with a different focus.

האתגר: העלאת מודעות להיקף תופעת הבריכות

חלום את הנושאים ברוחם למונחי (אחסון במענה לוח על דרך ביטחונה תחילה)

Instructions:

Keep exploring the challenge.

Try to understand the needs from the users' point of view.

It is advisable to consult with the representatives of the Organizations in the hive and with your instructors.

Look for inspirations, test cases and examples of similar products to make sure you do not offer solutions that already exist.

A worksheet for your use:

<https://www.uxpin.com/uxpin-workspace/>

0.000000

Task One. Task: Define - Finalize the challenge

Instructions:

The challenge creator usually wants to design the necessity to engage with their generation or a certain task. This is usually due to the forgetting process of the younger generation to take a full picture of what needs to be done and to be able to do it.

Identify the relevant users you have collected and analyzed:

Map the relevant users (rate their importance, from high to low)

Map and rate the importance of the tasks related to the challenge (high to low)

Formulate the challenge: How can we help the (target audience) to (the action) in order to (the value)?

Identify the relevant users

Map and rate the importance of the tasks

Formulate the challenge

How can we help the (target audience) the younger generation do (action) reach out in order to (any value)

Please make sure to constantly document the process, the work and the work. You will need to create documentation in the form of a poster and pitch that you will submit on the last day.

Practising diversion and Convergent thinking

Actions

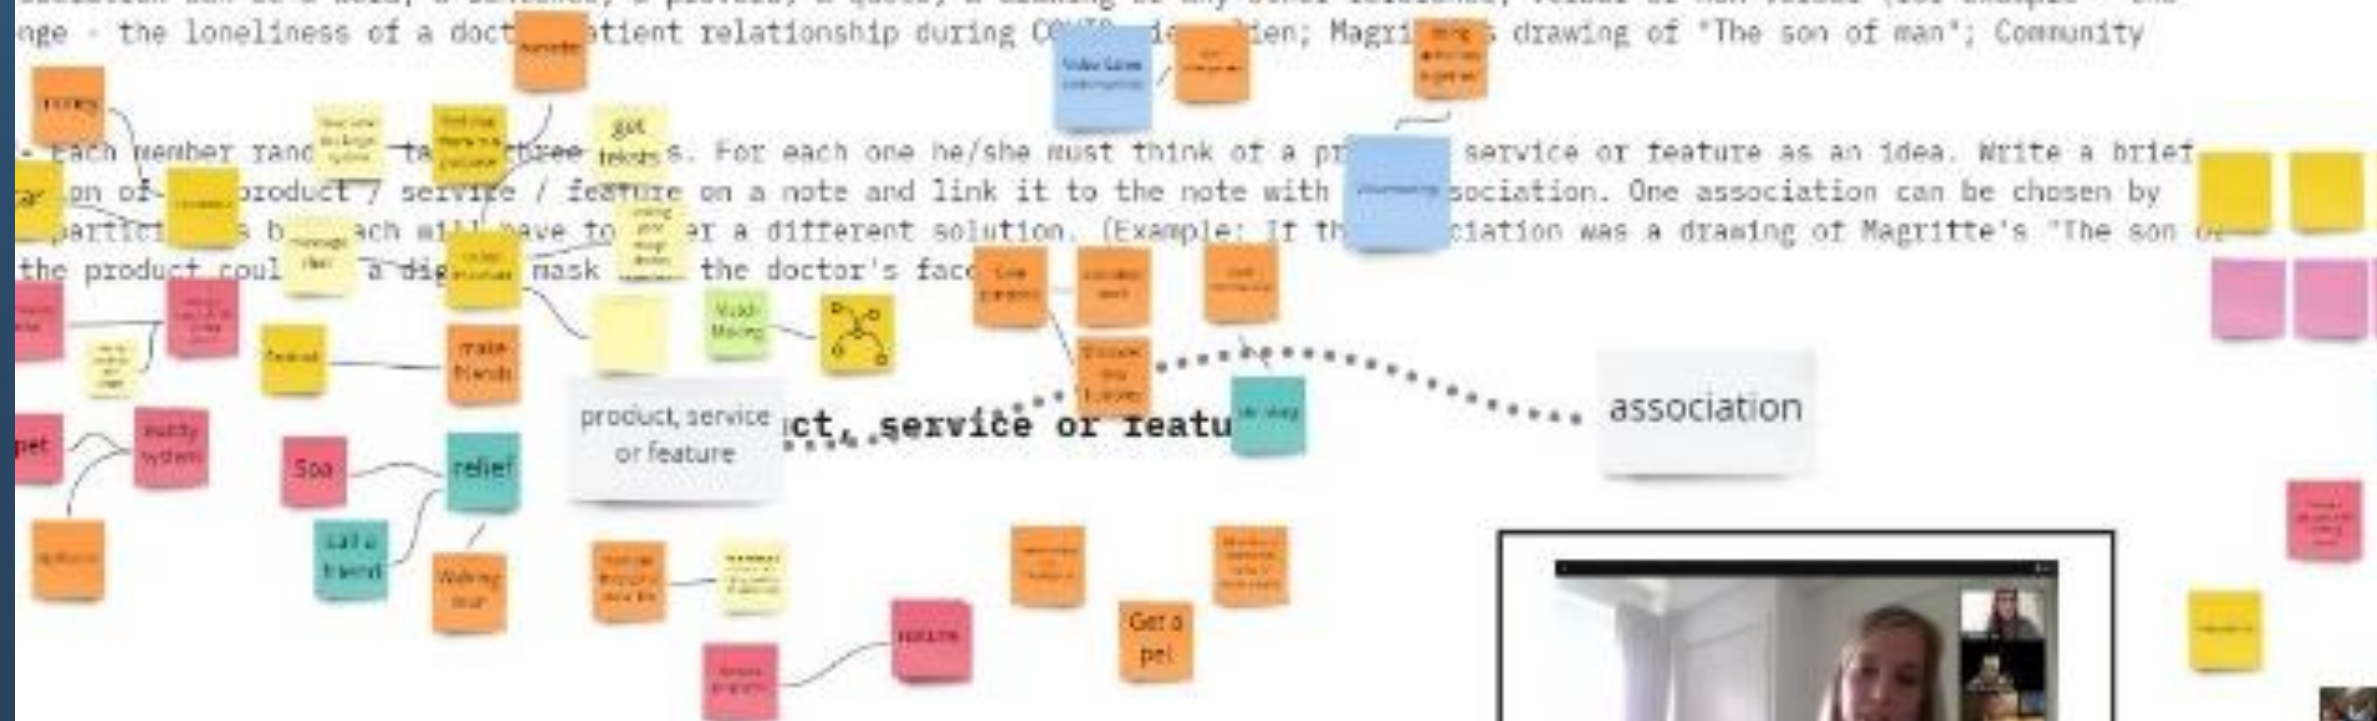

One: Diversion Thinking

Task has two steps:

- Each participant thinks of three associations regarding the group challenge and writes them on three notes.

Association can be a word, a sentence, a proverb, a quote, a drawing or any other reference, verbal or non-verbal (for example - the challenge - the loneliness of a doctor-patient relationship during COVID-19 pandemic; Magritte's drawing of "The son of man"; Community

- Each member randomly chooses one of the three associations. For each one he/she must think of a product, service or feature as an idea. Write a brief description of the product / service / feature on a note and link it to the note with the chosen association. One association can be chosen by each participant. Each will have to develop a different solution. (Example: If the association was a drawing of Magritte's "The son of man" the product could be a digital mask that covers the doctor's face.

Two: Convergent Thinking

Convergent Thinking

three steps to this task:

Team members will prepare a list of important characteristics for a possible solution for the problem they have chosen (sample features - digital; accessibility; physical, etc.).

Each feature will receive a breakdown of its important elements, as well as an indication of its importance (for example - for the 'digital' feature the breakdown may be: ability to run on mobile devices, accessibility for the blind, etc.).

Next: According to these features and characteristics you will be able to rate the ideas you have thought of below, so give some thought and refine the features. At this point you need to understand what is important in the project and how different features can help or interfere with the fulfillment of the purpose.

Good ideas

Importance

characteristics

Breakdown / Design Principles

הפיתוח הייצורתי

הפיתוח הייצורתי הוא תהליך של יצירת מוצר חדש או שיפור מוצר קיים. זה כולל את כל השלבים, מה מחקר ופיתוח ועד ייצור ושיווק.

The Solution

The challenge
The challenge is to create a solution that addresses the needs of the target audience while being cost-effective and scalable.

How It Works
The solution works by leveraging technology to streamline processes and improve user experience.

התאמה אישית

התאמה אישית היא תהליך של התאמת מוצר או שירות לפרט או קבוצת פרטים. זה כולל את כל השלבים, מהגיוס ועד הפיקוח.

התאמה אישית

התאמה אישית היא תהליך של התאמת מוצר או שירות לפרט או קבוצת פרטים. זה כולל את כל השלבים, מהגיוס ועד הפיקוח.

פיתוח מוצר

פיתוח מוצר הוא תהליך של יצירת מוצר חדש או שיפור מוצר קיים. זה כולל את כל השלבים, מהמחקר ועד הפיקוח.

Bondify

הפיתוח הייצורתי הוא תהליך של יצירת מוצר חדש או שיפור מוצר קיים. זה כולל את כל השלבים, מהמחקר ועד הפיקוח.

Care Cush

הפיתוח הייצורתי הוא תהליך של יצירת מוצר חדש או שיפור מוצר קיים. זה כולל את כל השלבים, מהמחקר ועד הפיקוח.

Pebbles Breathing Stones

הפיתוח הייצורתי הוא תהליך של יצירת מוצר חדש או שיפור מוצר קיים. זה כולל את כל השלבים, מהמחקר ועד הפיקוח.

Pebbles Breathing Stones

הפיתוח הייצורתי הוא תהליך של יצירת מוצר חדש או שיפור מוצר קיים. זה כולל את כל השלבים, מהמחקר ועד הפיקוח.

פלוטון

הפיתוח הייצורתי הוא תהליך של יצירת מוצר חדש או שיפור מוצר קיים. זה כולל את כל השלבים, מהמחקר ועד הפיקוח.

CHAD - AN APP FOR MENTAL SUPPORT

הפיתוח הייצורתי הוא תהליך של יצירת מוצר חדש או שיפור מוצר קיים. זה כולל את כל השלבים, מהמחקר ועד הפיקוח.

COMMUNI - BRACELET

הפיתוח הייצורתי הוא תהליך של יצירת מוצר חדש או שיפור מוצר קיים. זה כולל את כל השלבים, מהמחקר ועד הפיקוח.

הפרוקס של דור ה-Z: כיצד קרה שהדור הכי "מחובר" הוא גם הבודד ביותר?

גיבוש פרסונה: רוני, נערה בת 16 הממרכז, תלמידה חרוצה, מתנדבת בצופים ומבלה עם חברותיה, עדיין מוצאת את עצמה בודדה כאשר הרשתות החברתיות לא מצליחות למלא את החסר.

הפיתוח הייצורתי

הפיתוח הייצורתי הוא תהליך של יצירת מוצר חדש או שיפור מוצר קיים. זה כולל את כל השלבים, מהמחקר ועד הפיקוח.

30SEC 4HELP

הפיתוח הייצורתי הוא תהליך של יצירת מוצר חדש או שיפור מוצר קיים. זה כולל את כל השלבים, מהמחקר ועד הפיקוח.

Results:
**MCs' DT in online,
structured, collaborative tool**

Present assumptions and biases regarding the social challenge they faced

Summarize each day and plan future work

Map the identified challenges and stakeholders

Listing challenges from the most important challenge and stakeholder to the least ones

Divergent and convergent thinking

Presenting criteria and priorities

Linking associations and features

Features' voting

**Results:
Feedbacks**

Organizations:

Could learn the students' assumptions

High impression from the outcome

Students:

Satisfaction from the collaborative process

Importance of the challenge

Zoom fatigue

Stressed nature of the "Jam week"

Results:
Shared
understanding of all MCs

Solutions should manifest:

social connections

family involvement

sharing one's feelings with others

and empower the users with meaningful and enjoyable activities for improving their self-confidence

Several MCs address a challenge

For different stakeholders and from different points of view

Working in parallel

Using a collaborative tool

Applying human-centered-design methodology

- ✓ DT process facilitated in-depth learning of the various stakeholders
- ✓ The platform enabled the documentation of the work process
- ✓ The platform also enabled to share the MCs' proposed solutions with the stakeholders from the organizations, who were able to choose their preferred ones
- ✓ Having multiple MCs working in parallel on the same challenge with different stakeholders helped to understand the fundamental needs of lonely people
- ✓ Our findings highlight the important role of a collaboration platform in performing the DT process, and the contribution of interdisciplinary MCs working in parallel

Limitation:

- ✓ A single execution of multidisciplinary developers MCs practicing RE

Future Research

- ✓ Studying additional educational settings in facilitating this educational agenda and developers MCs RE
- ✓ Examining MCs RE in business settings that can involve developers' MCs, where each copes with different stakeholders
- ✓ Focus on different ways in which such MCs are formed and combined to a large crowd

Thank you!
